Introduction

This Annual Report was developed in accordance with the guidelines provided in Title 40 Code of Federal Regulations (CFR), Part 122.26(d) incorporated by reference in the Alabama Administrative Code 335-6 as administered by the Alabama Department of Environmental Management (ADEM) and NPDES ALR040030 Phase II General Permit effective October 1, 2021. During this reporting period, although COVID significantly impacted the implementation of many efforts geared to further promote and strengthen the storm water management program here on campus, a significant amount of work was performed to ensure that the MS4 requirements were successfully met.

The purpose of this Annual Report is to describe the compliance efforts reflected in the University's Storm Water Management Program Plan (SWMPP). The Annual Report will identify the control measure specific efforts undertaken by Auburn University from April 1, 2021 through March 31, 2022 to reduce the discharge of pollutants from Auburn University's main campus to the maximum extent practicable (MEP) to protect water quality and to satisfy the appropriate water quality requirements of the Clean Water Act (CWA).

This Annual Report and the University Storm Water Management Program is a result of a collaborative approach from individuals that represent both academic and operational areas of campus. The multi-disciplinary effort continues to be strengthened by its diversity and includes the following individuals and their areas of responsibility or interest:

Dr. Chris Anderson, Forestry & Wildlife Sciences
Mr. Nicholas Blair, Facilities Management – Design Services
Dr. David Blersch, Biosystems Engineering
Dr. Eve Brantley, Director Water Resource Center
Mr. Ben Burmester, Facilities Management – Office of University Architect
Mr. Josh Conradson, Facilities Management – Construction Management
Ms. Mona Dominguez, Alabama Water Watch
Mr. Malcolm Dailey, Facilities Management – Utilities & Energy
Ms. Valerie Friedmann, Architecture Planning & Landscape Architecture
Ms. Joan Hicken, Facilities Management – Waste Reduction & Recycling
Dr. Thorsten Knappenberger, Crop, Soil & Environmental Sciences
Mr. Mike Kensler, Office of Sustainability
Mr. Dan King, Facilities Management
Mr. Eric Klypas, Athletics Department – Field Management
Mr. Judd Langham, Facilities Management – Office of University Architect
Ms. Charlene LeBleu, Architecture Planning & Landscape Architecture

Mr. Glenn Loughridge, Campus Dining
Mr. Tom McCauley, Risk Management & Safety
Dr. Chandana Mitra, Department of Geosciences
Ms. Wendy Peacock, Facilities Management – Construction Management
Mr. Buster Reese, Facilities Management, Design Services
Ms. Amy Strickland, Office of Sustainability
Mr. Justin Sutton, Facilities Management – Landscape Services
Mr. William Walker, Campus Dining
Dr. Amy Wright, Department of Horticulture

MS4 Description

Auburn University is a large teaching and research institution located in Auburn, Lee County, Alabama comprised of approximately 1841 acres of contiguous property, 427 buildings and 206 academic buildings. Auburn University is one of the major land grant/ liberal arts and science universities in the southeast. The area surrounding Auburn University consists of residential property to the east and southeast, agricultural property to the southwest and west and urban city property to the north and east.

Control Measures

Stormwater management controls or Best Management Practices (BMPs) will be implemented to the MEP to minimize pollution in storm water discharges from Auburn University's main campus. AU's Policy on Storm Water Management Compliance (**Appendix B**) serves as the regulatory mechanism as required by the Permit. The Permit and SWMPP require BMPs to be implemented addressing five minimum control measures. As required by Part III.B. of the Permit, the Annual Report will describe the University's efforts performed during this reporting period to implement the established BMPs (Public Education & Public Involvement on Storm Water Impacts, Illicit Discharge Detection & Elimination, Construction Site Storm Water Runoff Control, Post Construction Storm Water Management in New and Redevelopments and Pollution Prevention / Good Housekeeping for Municipal Operations) and will include:

1. The status of AU's compliance with Permit conditions, an assessment of the appropriateness of the identified BMPs, and progress towards achieving the statutory goal for each of the minimum control measures.
2. Results of information collected and analyzed during this reporting period, including any monitoring data used to assess the success of the SWMPP at reducing discharge of pollutants to the MEP.

3. A summary of storm water activities the University plans to undertake during the next reporting cycle.
4. Proposed changes to the University's SWMPP.
5. All monitoring results collected during the reporting period in accordance with Part V. of the Permit.

BMP: Public Education & Public Involvement on Storm Water Impacts

Storm water pollution prevention education leads to an informed and knowledgeable campus community that is more likely to support and comply with the BMP provisions. The targeted "Public" audiences of the University's SWMPP are Auburn University faculty, staff, students, and visitors, which populate the campus on any given day. Within these populations, only students in residence housing live on campus. All other students, employees and visitors reside in the surrounding communities. The following activities were performed during the reporting period that were consistent with the intent of the SWMPP as follows:

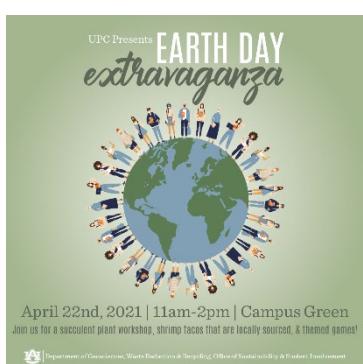

Presentations and Events

Multiple presentations were offered by Auburn University throughout the course of this reporting period to promote water quality and storm water management principles. Presentations were offered by a variety of different AU entities and for diverse AU and non-AU audiences.

Earth Day Extravaganza (April 22, 2021)

An annual Earth Day celebration was attended by an approximate 400 students, faculty and staff open to all. In addition to a succulent workshop and themed games, the 13th annual "Climate in the News" poster session will include an array of interesting topics. Students from Sociology of Natural Resources and Environment, RSOC 5650/6650, and Urban Climatology, ESSI 8040, examined the portrayal of News Media Influence on Climate Denialism; Climate Disasters as a Driver in Forced Human Migration; and Media Discourse Analysis of the Limitations and Barriers to Adoption of Climate Smart Technology.

Camp War Eagle (May-July 2021)

Every summer prior to the fall semester, Auburn University hosts Camp War Eagle (CWE) for incoming freshman. Through CWE, freshman students are provided an experience that promotes the academic, social, and personal opportunities incoming freshmen students can experience. A website provides all necessary information and instructions to prepare incoming freshman for an orientation session and the first year at Auburn University. The Office of Sustainability provides information on sustainability at Auburn and hand out a [Sustainable Student Action Guide](#), which includes a section on “Saving Water” listing water conservation and water quality practices.

Academic Class Presentation (Multiple Sessions Throughout the Academic Year)

The Office of Sustainability provides lectures to undergraduate students on the general concepts of sustainability and Auburn University’s specific sustainability efforts, including reviewing stormwater best management practices found on campus. Multiple sessions are offered throughout the academic year and attendance varies from 12-100+ students per session.

Spirit of Sustainability Award Recognition (August 21, 2021)

An Office of Sustainability event that strives to inform and educate the Auburn University students on managing waste on campus properly and getting them connected to key offices that can support their sustainability actions. Tiger Dining-Community Garden, the Waste Reduction & Recycling Department, and the Office of Sustainability all had tables that students could visit to learn more about the programs and resources on campus. An estimated 50 students participated in the annual event.

Alabama Stormwater
Association

Film Festival with the Alabama Rivers

Alliance (November 9, 2021)

The Office of Sustainability hosted the fall film series at Pebble Hill on November 9, 2021. The film series, titled Southern

Exposure, was created by the Alabama River's Alliance. In film explores a once in a generation chance to change the operation of a major dam and discover a special place at the foot of the Appalachian Mountains. Remarkable stories of the families along the Selma to Montgomery March route, grapple with wastewater infrastructure challenges were told along with protective exchanges with advocates who are working to protect their communities. Approximately 40 individuals from campus participated.

Tree Planting (January 25, 2022)

An estimated 50 volunteers from the City of Auburn and Auburn University hosted a tree planting at the University's Kreher Preserve and Nature Center located on Hwy 147. Volunteers helped plant short leaf pine trees in the Preserve. These trees, other vegetated features serve as natural filters to accommodate stormwater in an urban environment while also preserving our environment.

Alabama Storm Water Association Sponsored Events & Activities (June 7, 2021, September 15, 2021, December 2, 2021)

Alabama Stormwater Association (ASA) continued to grow during this reporting period and offered virtual learning opportunities on three occasions for those interested. Member of AU's Stormwater Committee attended the 2021 IECA/EPA Municipal Wet Weather Stormwater Conference (a.k.a. "MS4 Conference") held in Huntsville on June 7-9.

ASA was well-represented at the 2021 Clear Water Alabama Seminar & Field Day. Clear Water

Alabama returned to its traditional, in-person format after being held virtually in

2020 (with the support of ASA and other organizations). The seminar and field day took place on September 15 and 16, respectively, at Camp Meadowbrook in Cullman, AL. Many attendees and event organizers were ASA members.

On December 2, 2021, ASA offered a virtual seminar entitled “Meeting MS4 Permit Requirements, Old and New”. The seminar’s speakers Mr. Jimbo Carlson and Ms. Cammie Ashmore of ADEM gave an overview of the changes in the reissued MS4 Phase II General Permit (NPDES ALR04000), highlighted common MS4 compliance issues ADEM has observed and discussed the new Alabama Environmental Permitting and Compliance System.

Peers Network Battery Recycling Program (continual)

Sponsored by the Office of Sustainability, the Ambassadors are introduced to all the sustainability-related practices and policies at Auburn University, including the Storm Water Management Plan and practices on campus. The Battery Recycling initiative has located over 60 bin locations around campus to allow the campus community an easy way to recycle their used batteries rather than throwing them in the solid waste trash receptacle. During this reporting period, 4261.5 Lbs. of batteries were recycled.

The Alabama Cooperative Extension System (ACES) is the primary outreach and engagement organization for the land-grant mission of Alabama A&M University and Auburn University in cooperation with Tuskegee University. ACES provides research-based educational programs in agriculture; forestry, wildlife, and natural resources; family and consumer sciences; economic and community development; 4-H and youth development; and urban affairs. Programs, educational tools, and presentations include:

Alabama Water Steward is a science-based educational program from the Alabama Cooperative Extension System and ADEM designed for the public that promotes healthy watersheds, increases understanding of water pollution, and provides knowledge and tools to prevent and resolve local water quality problems.

The goal of the program is to deeply engage Alabama's citizens with the role they can play as stewards of their local environments, and to provide people with the tools they need to make a meaningful impact in their own watershed.

The AWS program offers an education curriculum and hands on training. The educational curriculum is offered as both virtual week-long, self-paced course and a 1-day in person course. The curriculum uses a combination of video lectures, discussions, and resources, to introduce participants to the basics of watershed function, water quality parameters and watershed impairments, best management practices for improving water quality, the role of community leadership and watershed planning, and more. The program also consists of more in depth training opportunities, including workshops on how to install rain gardens, conduct local litter pickups, install rain barrels, and information for designers and engineers on installing other green infrastructure practices.

The Water Resource Center –
Alabama Water Watch

The Water Resource Center was created to facilitate interdisciplinary collaboration among Auburn University faculty, staff, and students on water-related research, outreach, and instruction; conduct innovative research to find practical solutions for current and future water issues; and empower private citizens to become active stewards of water resources. The Center's objectives include:

1. To provide research-based information to environmental professionals and policy makers for improved management and protection of Alabama's water resources.
2. To promote holistic management of water resources that supports multiple uses (agricultural, industrial, ecological, recreational, etc.).
3. To facilitate interdisciplinary, multi-institutional collaboration among Auburn University faculty, staff, and students on water-related research, education, and community engagement.
4. To empower private citizens to be better stewards of local, regional, national, and international water resources through water quality monitoring training.

The Center houses the Alabama Water Watch (AWW) which is a citizen volunteer, water quality monitoring program covering all the major river basins of the state. The mission of AWW is to improve water quality and water policy through citizen monitoring and action. With a "data-to action" focus, AWW helps volunteers collect, analyze, and understand their water monitoring data to make positive impacts. Established in 1992, AWW is a national model for citizen involvement in watershed stewardship, largely because of its three interrelated components: citizen monitoring groups, a university-based program, and a non-profit association. AWW follows EPA-approved quality assurance monitoring plans with a community-based, science-based approach to train citizens to monitor water quality conditions and trends of their local waterbodies.

See the Annual Reports for both Auburn University's Water Resource Center and Alabama Water Watch to learn of all the AUsome people and services provided this past year!

PMC Biggio to Lem Morrison	03-26-22	5	Students associated with BIG Event

Sustainable Development Goals

[Website](#)

The University's Office of Sustainability promote Sustainable Development Goals (SDGs) with various focuses.

The [Sustainable Development Goals \(SDGs\)](#) emerged from rigorous research into global conditions and trends and provide a:

"blueprint to achieve a better and more sustainable future for all. They address the global challenges we face, including those related to poverty, inequality, climate change, environmental degradation, peace and justice. The 17 Goals are all interconnected, and in order to leave no one behind, it is important that we achieve them all by 2030." ~United Nations

Initiated in 2012 at the United Nations (UN) Conference on Sustainable Development in Rio de Janeiro, they follow up the eight [Millennium Development Goals \(MDGs\)](#) established in September 2000 and were adopted by the UN in 2015.

During this reporting cycle, two SDGs focused on waste conservation and preservation. Below are the links to the SDGs

[SDG 14: Life Below Water \(Oct 2021\)](#)

[SDG 6: Clean Water & Sanitation \(Feb 2022\)](#)

Auburn Student Government Association's Big Event (March 26, 2022)

Hundreds of student volunteers provided community services to the surrounding community. The BIG Event gives thousands of Auburn students the opportunity to give back to the Auburn & Opelika community. One particular group was assigned to a creek clean up on campus to remove litter and debris. As students go into the community to serve its homeowners through yard work or housework, the student body was able to make a positive impact.

Measure Specific Evaluation

Auburn University continued to be successful in providing a variety of information related to storm water management, water quality and water conservation to AU and non-AU entities. AU strives to engage all faculty, staff, and students through education to serve the community and to become more involved in making a positive impact. During this reporting period, AU continued to foster an open and collaborative relationship with the many different groups on and off campus, through the continued pursuit of research initiatives and funding to improve and protect water resources as witnessed by the Auburn Water Resource Center, the innovative research being done by the many academic disciplines on campus and for the continued efforts by the Office of Sustainability and the SGA to engage the campus community.

Measure specific activities planned for the next reporting period

During this next reporting period, Auburn University plans to continue to promote the goals of the storm water program to include at a minimum:

1. Continue to sponsor multiple PMC campus clean up events.
2. Participate with ALOAS and other entities to offer the annual Lee County Water Festival (2022).
3. Continue to be an active ASA Board Member and assist in the development and delivery of multiple learning opportunities.
4. Continued promotion of Parkerson Mill Creek (PMC) and the PMC Watershed Management Plan.
5. Continue partnership with ALOAS to communicate local storm water challenges, opportunities and community concerns and strive towards returning to a regular schedule for meetings with the public.
6. Continue to promote sustainability initiatives to include storm water management best management practices.

BMP: Illicit Discharge Detection & Elimination

During this reporting period, Auburn

University continued to utilize the storm water infrastructure engineering assessment to prioritize areas on campus requiring further assessment and/or repair along with field observations by AU Facilities Management – Utilities and Energy, Mechanical Shops, Water Resources and Risk Management & Safety to investigate sources of potential illicit discharges. An updated map is attached to this report and identifies the storm water conveyance system maintained by the University.

Through continued educative efforts, an informed campus community is relied upon to relay observations of potential illicit discharges. These observations are communicated to AU Administration through multiple methods to include Facility Management's 24-hour Work Management System (844-HELP), the AU "Ask Facilities" web tool or communicating directly to Risk Management & Safety. Dry weather screening is performed on an annual basis on the outfalls identified on campus. Screening includes visual observations of flow, and infrastructure condition. Upon discovery or suspicion of a potential illicit discharge, further investigation is initiated. A variety of measures can be deployed to track the source of the illicit discharge and may involve multiple AU groups as well as the City of Auburn, as necessary. The listing of outfalls evaluated this reporting period and IDDE Details are included as **Appendix E** to this report.

Illicit Discharge Detection & Elimination (IDDE) training is provided annually and during this reporting period 164 individuals received Stormwater Training that covers the elements of the IDDE program.

Measure Specific Evaluation

Auburn University continued IDDE efforts and address sources of pollutants from being introduced into the University's MS4. Accomplishments and ongoing actions supporting this BMP included:

- Maintenance of the University's Policy on Storm Water Compliance continues to serve as the regulatory mechanism for this measure.
- On-line stormwater training was provided to operational personnel that included illicit discharge detection and elimination elements. During this reporting period, training was provided to 164 individuals were trained.
- Annual dry weather screening was successful in identifying two illicit discharges involving sanitary/storm cross connection into the University's MS4. Both events were thoroughly investigated, and sources of cross connection identified and ceased. Auburn University worked closely with the City of Auburn to resolve issues with one of these cross connections. AU Facilities Utilities and Energy map all utilities upon installation and are instrumental in recognizing and promoting suspect infrastructure.
- The continued evaluation of the infrastructure engineering assessment and evolving conditions gives Facilities Management direction and enables a prioritized approach to infrastructure management.

Measure specific activities planned for the next reporting period

Auburn University will continue the Illicit Discharge Detection and Elimination measures as defined in the University's SWMPP. During the next reporting period, the following activities are planned:

1. Provide annual IDDE training to university employees, students and visitors to increase community's level of awareness to pollution prevention.
2. Explore opportunities to improve stream corridor and infrastructure condition as needed through continual investigation.

BMP: Construction Site Storm Water Runoff Control

In accordance with Part III (B) (4) of NPDES Permit No ALR040030, Auburn University developed the Construction Site Storm Water Runoff Control Best Management Practice. Auburn University's Facilities Management is responsible for all construction projects on campus and implementation of this measure.

During this reporting period, a total of nine (9) qualifying construction sites were managed on campus that required storm water protection measures to be implemented and maintained. Details specific to these 9 sites to include the number of inspections, number of complaint notices and number of run off complaints can be viewed in **Appendix A** of this report.

Measure Specific Evaluation

Based on the requirements identified in Part III (B) (4) of NPDES Permit No ALR040030, Auburn University implemented Design Standards assist in meeting these requirements. The Design Standards establish a measurable performance standard to qualify the effectiveness of on-site controls. The inclusion of turbidity monitoring into specified projects has been an excellent measure to evaluate the implementation of the site-specific ESC Plan. The training events allowed for a collaborative exchange of information and developed a common understanding of expectations.

Measure specific activities planned for the next reporting period

Auburn University will continue implementing Construction Site Storm Water Runoff Control as defined in the University's SWMPP. During the next reporting period, the following activities are planned:

1. Provide annual training event to AU Project Managers and Design Engineers.
2. Investigate opportunities to collaborate with local governments to offer training event to the public.

BMP: Post Construction Storm Water Runoff Control

As a component of the Auburn University Design and Construction Standards, the Post Construction Stormwater Manual provides the principles, guidelines, and standards for stormwater management design for new campus projects. By providing a set of comprehensive best management practices for stormwater management, future campus construction projects will protect and improve water quality, provide campus flood protection, and reduce stormwater flow rates to downstream waters. The Post Construction Stormwater Manual includes a stormwater management review checklist to review compliance with the University's design standards. Multiple projects were completed, are in construction, or are currently being designed during this reporting year.

A listing of projects reviewed in this reporting year are found below:

Project No.	Project Name	Stormwater Best Management Practices (BMPs)					
		Detention or Retention	Subsurface Detention	Bioretention	Pervious Paving	Green Roof	Stream Restoration
20-105	Duncan Drive Extension and Infrastructure	Yes	No	Yes	Yes	No	No

Multiple projects also were completed that added permanent post-construction stormwater best management practices to the campus inventory. A highlight of those can be found in the images

below and bolded in the overall summary of the campus wide BMPs located in the table found in Appendix F.

Detention Pond at New Tennis Courts (Football Performance Center Tennis Court Relocation - AU Project 19-441).

Stream Restoration along Biggio Drive adjacent to Parkerson Mill Creek Greenway (Football Performance Center - AU Project 19-441).

Measure Specific Evaluation

During this reporting period, Auburn University continued efforts to strengthen this measure through education and increasing expectations. Utilizing an extensive plan review process, AU staff have been successful in promoting many stormwater best management practices during this reporting period.

Measure specific activities planned for the next reporting period

Auburn University will continue implementation of Post Construction Storm Water Management in new development and redevelopment as defined in the University's SWMP. During the next reporting period, the following activities are planned:

1. Continue to provide training to University Design Leads on the Design Standards required for future University projects.
2. Continue to perform and document post construction BMP inspections to ensure they are being maintained and functioning as designed.
3. Continue to maintain an updated inventory of storm water BMPs (Appendix F)

BMP: Pollution Prevention / Good Housekeeping

Parking Lot, Parking Deck Cleaning Program

Facility Management's Landscape Services utilizes street sweepers daily to address the removal of accumulated debris (270 yd³) from parking lots, parking decks, streets, pedestrian walkways and sidewalks. Landscape Services provides daily inspections of streets, street drains and curbs. During fall and winter months, Landscape Services removes leaves and other debris daily throughout campus. Landscape Services also incorporates the use of a large vacuum that allows the landscape debris, which is harvested on campus grounds, to be removed before it is introduced into a storm drain system. Mowers with mulching equipment pulverize leaves, limbs and debris on site which reduces possible storm drain blockage. This process is reduced during the spring and summer months unless storms or high winds cause leaves, limbs, and debris to cover our campus grounds and streets; at that point we use the same procedures as the fall and winter removal. This system not only reduces the problem of storm drain blockage but allows AU to compost the harvested material and eventually incorporate it back into campus landscape.

Storm Water Conveyance System Cleaning Program

Auburn University Landscape Services inspects all storm water conveyance outfalls routinely throughout the year. This is done after each heavy rain or storm activity. If any large limbs, trees, or debris are blocking the area, the blockage is removed as quickly as possible.

Streamside maintenance to include invasive plant removal continues and allows better accessibility to Parkerson Mill Creek. On-going efforts to remove invasive vegetative species and replace with native species have further enhanced Parkerson Mill Creek. Throughout this reporting period, Landscape Services calculated the removal of approximately 877 yd ³ of landscape debris.

Integrated Pest Management

All areas maintained on campus have a four-tiered management system, however all areas are not equal in tolerance and /or action thresholds. These thresholds are based on pedestrian traffic, tolerance thresholds set down by building occupants and historic importance of an area.

Understanding that over application of chemicals to control pests on campus landscapes can have a detrimental effect to the environment, Facility Management's Landscape Services objective is to survey/monitor selected areas on campus and determine if the threshold of a pest warrants chemical applications. Incorporation of best management practices such as aeration, fertilization and proper irrigation promote healthy trees, shrubs and turf while reducing the unnecessary level of chemicals applied to the environment.

An estimated 235 acres of AU main campus's premium areas (turf, trees, shrubs, and hardscapes) receives targeted IPM application. Leaves on turf and turf clippings are mulched and/or recycled to reuse on campus. It is estimated that 4200 yd ³ of grass clippings are beneficially reused on campus each year.

Waste Reduction & Recycling

The Waste Reduction and Recycling Department (WRRD) manages all waste contracts on campus and works with faculty, staff, and students daily to provide easy and convenient recycling to Auburn University.

WRRD manages the Campus Building Recycling program, Game Day Recycling, Recycle Mania, office clean-outs, toner and ink cartridge recycling, indoor/outdoor event trash and recycling bins, and secure document shredding services. WRRD promotes initiatives to divert waste from being managed to a landfill. Diverted wastes include construction demolition waste, paper, cardboard, aluminum cans, plastics, steel cans, metals and toner/ink cartridges.

WRRD promoted Global Recycling Day (March 18, 2022), educating people about the importance of recycling to our economy and environmental well-being, and encouraging individuals to commit to learn more about recycling in their community, to recycle consistently and correctly, and to buy products made from recycled content.

Waste reduction and recycling initiatives are also promoted through education and outreach on campus and in the surrounding community. Outreach initiatives encompass events, including Earth Day Extravaganza, GameDay Recycling, Collegiate Recycling Challenges, and community partnerships, such as the East Alabama Recycling Partnership.

Spill Prevention Control & Countermeasure (SPCC) Program

Auburn University maintains compliance efforts consistent with 40 CFR 112 and the University's SPCC Plan. The SPCC Plan addresses the University's program to manage oil and other petroleum products defined by 40 CFR 112.7(2) and 40 CFR 112.7(4). This includes the management of fuel oils, gasoline, lubricating oils, hydraulic and dielectric fluids as they are utilized and stored on Auburn University's main campus. The University inspects all applicable containers (fuel tanks, generators, elevators, and drums) monthly and all transformers annually. These routine inspections evaluate the condition of the containers to ensure proper functionality and management to prevent releases to the environment.

Applicable SPCC containers	Number of Inspections	Volume of SPCC applicable oil (gallons)
Tanks, Generators, Drums	720	145120
Elevators	1332	17380
Pad Mount Transformers	244	58707
Satellite Equipment	17	3769

Used Oil Recycling Program

Auburn University's Department of Risk Management & Safety and Facilities Management routinely collects and recycles used oil from campus operations. Throughout this reporting period, AU retained the services of Universal Environmental Services, LLC based out of Peachtree City Georgia for removal and recycling of campus generated used oil. Throughout this reporting period, Universal Environmental Services collected 2068 gallons of used oil from campus operations for recycling.

Used Cooking Oil Recycling Program

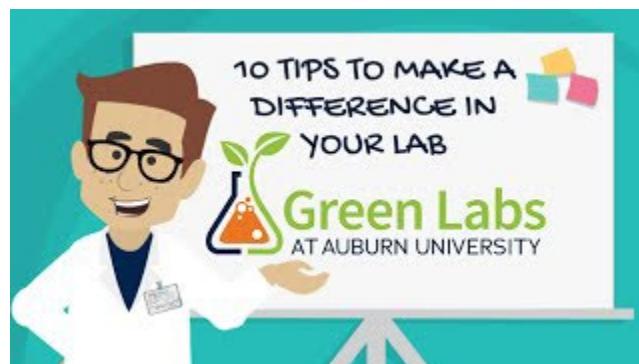

Auburn University's Dining Services collects and recycles all used cooking oil generated from the University's dining facilities. During this reporting period, approximately 4065 gallons of used cooking oil was collected under contract with Green Earth Options Bio-Fuel.

Regulated Waste Management

Risk Management & Safety promotes proper regulated waste management throughout all campus operations. Regulated waste includes RCRA hazardous waste, universal waste lamps, batteries, pesticides, mercury-containing equipment, and electronic waste. Through reoccurring training events, consultations and other marketing strategies, proper management of these items are promoted. Disposal of these items via solid waste or sanitary sewer is prohibited. Proper container management by the generator is critical to ensure compliance with regulatory requirements and to prevent releases of harmful chemicals to the environment. During this reporting period, AU properly managed 9023 individual containers of hazardous waste, 16907 Lbs. of medical waste and 403853 Lbs. of pathological waste.

Green Labs Program

Laboratory spaces foster innovation, research, and student learning across Auburn's campus. Yet, the impacts they have on our health, budget, and environmental footprint can be some of the most intense of campus

facilities. A [Green Labs Program](#) proactively addresses negative impacts often associated with labs, so the primary focus can remain on educating and innovating for our future.

During this reporting period, a variety of stakeholders targeted the recycling of pipette tip boxes that are made of recyclable plastic but normally discarded as solid waste. Pipette tip boxes account for estimated 75% of all waste generated from campus laboratories. The long-term goal of the Green Labs Program is to improve research efficiency, enhance laboratory safety, reduce energy, and water consumption, minimize waste, and support the university's sustainability policy and goals.

Measure Specific Evaluation

Throughout this reporting period, the on-going preventative measures taken by multiple groups on campus have removed items that could have been ultimately destined to our local landfill, groundwater and or surface waters. The University promotes waste minimization efforts to

include regulated hazardous and non-hazardous wastes, e-waste and construction and demolition waste through reuse and recycling. The University has developed sound practices to manage equipment and operations to minimize releases to the environment and provides training to University and contractual employees on these best management practices.

Measure specific activities planned for the next reporting period

Auburn University will continue to perform and promote sound pollution prevention good housekeeping management practices.

1. Continue to provide pollution prevention environmental awareness training to campus.
2. Maintain an updated municipal facility inventory.
3. Seek opportunities to promote Green Lab Initiatives geared towards reducing our laboratory footprint.

Monitoring Plan for Pathogen Impairment

The Parkerson Mill Creek Watershed is in Lee County; the watershed is part of the Chewacla Watershed, in the lower Tallapoosa River Basin. The 9.3 square mile (5,981 acres) watershed contains 21,000 meters (68,500 ft.) of main stem perennial stream and approximately 86,000 meters (282,152 ft.) of tributary stream length. The stream network empties into Chewacla Creek, just south of the H.C. Morgan Water Pollution Control Facility

The watershed includes the City of Auburn, Auburn University, and the surrounding areas. The headwaters of Parkerson Mill Creek are approximately 3,000 meters (9,845.5 ft.) in length and are located on the campus of Auburn University.

In 2007, ADEM listed Parkerson Mill Creek as impaired on Alabama's 303(d) List of Impaired Waters for pathogens from point source and non-point sources, primarily urban runoff, and storm sewer connections. As such, Auburn University monitors Parkerson Mill Creek by performing bacteriological analysis through the AU Water Resource Center's Alabama Water Watch (AWW) program. The results of the monitoring effort for this reporting period are contained in **Appendix C** of this Annual Report.

Appendix A

Construction Site Details

April 1, 2021 through March 31, 2022

Appendix A

Construction Site Details for permit year:

April 1, 2021 to March 31, 2022

Project #	Project Name	Design Lead	Const. Lead	Architect	Civil Engineer	General Contractor	Civil Contractor	# of Inspections Performed by Contractors and Consultants	# of Inspections Performed by Auburn University	# of Non-compliant notices
15-034	Academic Classroom & Laboratory Complex (ACLC) - New Facility	Bradley Prater	Nicholas Nowlin	Perkins Will	LBYD	Rabren General Contractors	D&J Enterprises	24	14	0

Appendix B

Policy on Storm Water Management Compliance

April 1, 2021 through March 31, 2022

POLICY ON STORMWATER MANAGEMENT COMPLIANCE

I. POLICY STATEMENT

Auburn University ("The University") shall manage its stormwater in compliance with the National Pollutant Discharge Elimination System (NPDES) General Permit ALR040030 ("The Permit"), or subsequent permits, and the University's Stormwater Management Plan.

II. POLICY PRINCIPLES

A. The University's "Policy on Stormwater Management Compliance" governs the University's Stormwater Management Program. This Policy guides the University in administering the requirements and procedures of the Permit as required of the University and as administered by the Alabama Department of Environmental Management (ADEM).

B. Regulatory Background:

1. The United States Environmental Protection Agency (EPA) and ADEM have designated the University as an owner/operator of a Phase II municipal separate storm sewer system (MS4). The EPA's Clean Water Act Phase II Stormwater Regulations (implemented March 2003) require operators of regulated Phase II MS4s to obtain an NPDES permit and to develop a stormwater management program designed to protect water quality and to prevent harmful pollutants in stormwater runoff from being discharged into the MS4.
2. The intent of the Clean Water Act Phase II regulations is to reduce adverse impacts to water quality and aquatic habitat by instituting the use of best management practices on sources of stormwater discharges not regulated by other measures. In order to comply with the Clean Water Act Phase II regulations, the University must satisfy six "minimum control measures," including:
 - a. Public Education and Outreach
 - b. Public Participation/Involvement
 - c. Illicit Discharge Detection and Elimination
 - d. Construction Site Runoff Control
 - e. Post-Construction Stormwater Management
 - f. Pollution Prevention/Good Housekeeping
3. Parkerson Mill Creek was determined to be "Impaired Water" and consequently placed on the ADEM 303(d) list of impaired and threatened waters ("303(d) list") in 2008 and 2010. Known water quality concerns have been identified as pathogens resulting likely from urban runoff and sewer cross connections. A Total Daily Maximum Load (TMDL) for Parkerson Mill Creek was issued by ADEM in September 2011. Implementation of this stormwater TMDL was addressed in the Permit.

- C. A University Stormwater Management Plan (SWMP) has been created and annually updated since 2009. The SWMP was created in compliance with EPA and ADEM requirements as identified in the Permit and in concert with the Campus Master Plan, the Landscape Master Plan and the Policy for Natural Resource Management. The SWMP details the measures that are to be taken to meet the six minimum control measures identified above, identifies the University entity(s) having responsibility towards each measure and the metrics to evaluate their effectiveness.
- D. It is University policy that all stormwater shall be managed in accordance with the SWMP and that all University organizations and non-University organizations operating on University's main campus shall conduct their operations and activities in compliance with this plan.

III. EFFECTIVE DATE

This policy is in affect as of June 15, 2016.

IV. APPLICABILITY

This policy applies to all University organizations, as well as all University operations, construction projects, and other campus activities.

V. POLICY MANAGEMENT

Responsible Office: Auburn University Facilities Management

Responsible Executive: Executive Vice President, Auburn University

Responsible Officer: Associate Vice President, Facilities

VI. DEFINITIONS

303(d) List: List of impaired and threatened waters (stream/river segments, lakes) that the Clean Water Act requires all states to submit for EPA approval every two years on even-numbered years. States identify all waters where required pollution controls are not sufficient to attain or maintain applicable water quality standards, and establish priorities for development of TMDLs based on the severity of the pollution and the sensitivity of the uses to be made of the waters, among other factors. States then provide a long-term plan for completing TMDLs within 8 to 13 years from first listing.

ADEM: Alabama Department of Environmental Management, the governing body responsible for enforcing environmental regulations in the State of Alabama.

Best Management Practices (BMP): Activities or structural improvements that help reduce the quantity and improve the quality of stormwater runoff. BMP include treatment requirements, operating procedures, and practices to control site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage.

Campus Master Plan: As stipulated in the University's "Campus and Capital Projects Planning Policy," the Campus Master Plan "is a physical plan and comprehensive set of policy directives that together provide long-range strategies for the growth and development of the Auburn University campus." The Campus Master Plan is updated periodically, as required, and the Board of Trustees reviews and approves all changes.

Campus Master Plan Land Use Element: The chapter of the Campus Master Plan that establishes formal Land Use Categories and Land Use Area boundaries that define permitted uses for all University Land.

Clean Water Act (CWA): Act passed by the United States Congress to control water pollution, formally called the Federal Water Pollution Control Act of 1972 or Federal Water Pollution Control Act Amendments of 1972.

Environmental Protection Agency (EPA): United States agency responsible for protecting human health and the environment.

Executive Facilities Committee: Appointed by the President, a senior group of University Administrators, representing major facility stakeholders, that considers and formulates recommendations for the President, regarding campus facility plans and programs.

Landscape Master Plan (LMP): Developed as a component, or sub-plan, of the Campus Master Plan, the LMP provides prescriptive requirements of a design approach that will guide the University toward implementation and realization of the landscape vision for the Auburn campus. The LMP document aids in defining the project scope of each campus project that affects Auburn University exterior facilities and provides tools designed to ensure that each project is viewed within its larger campus context and contributes to the success of the larger campus landscape.

Master Plan Committee: A representative committee appointed by the President that provides input regarding facilities, planning, transportation planning, land planning, infrastructure, and site development activities. The Committee also provides input on the continuing administration, maintenance, implementation, change, and updating of the Campus Master Plan.

Municipal Separate Storm Sewer System (MS4): is a conveyance or system of conveyances owned by a state, city, town, village or other public entity that discharges to waters of the U.S.

Natural Resource Management Area (NR): The Campus Master Plan Land Use Category and Land Use Area, identified on the Campus Master Plan as "NR," that identifies areas of the campus that are designated for natural resource protection and enhancement with limited development potential. NR areas include land located on either side of Parkerson Mill Creek and Town Creek and their tributaries, FEMA 100- year floodplains, wetlands, streams, steep slopes, and critical buffer zones.

NPDES: National Pollutant Discharge Elimination System. The national program for issuing, modifying, revoking, reissuing, terminating, monitoring, and enforcing permits and for imposing and enforcing pretreatment requirements under sections 307, 318, 402, and 405 of the Clean Water Act (CWA).

Parkerson Mill Creek: One of two principal stream systems, including all tributaries and main channel streams, that flows on the University main campus (see appendix 1); a tributary of Chewacla Creek, which flows into the Tallapoosa River.

Parkerson Mill Creek Watershed: Area of land on the University main campus that drains the tributaries, main channel, stream banks, and floodplain of Parkerson Mill Creek (see appendix 1).

Pathogens: Microorganisms that can cause disease in other organisms or in humans, animals, and plants. They may be bacteria, viruses, or parasites and are found in sewage, in runoff from animal farms or rural areas populated with domestic and/or wild animals, and in water used for swimming. Fish and shellfish contaminated by pathogens, or the contaminated water itself, can cause serious illnesses.

Permit: The National Pollutant Discharge Elimination System (NPDES) General Permit ALR040030 issued to Auburn University.

Policy for Natural Resource Management: University policy that implements the Campus Master Plan Land Use Element as it relates to University Land designated as natural resource protection and enhancement areas with limited development potential, including the protection, enhancement, and restoration of Parkerson Mill Creek, Town Creek, and the tributaries within their watersheds on the main campus.

Stormwater: Runoff occurring when precipitation flows over the ground. Impervious surfaces like driveways, sidewalks, and streets prevent stormwater runoff from naturally soaking into the ground. These discharges often contain pollutants in quantities that could adversely affect water quality. Federal regulations require permits for stormwater discharges associated with industrial activity, construction projects (disturbing one or more acre of land) and MS4s. These permits require controls to reduce the transport of pollutants in storm water to waters of the United States.

Stormwater Management Plan (SWMP): University plan developed for the implementation of NPDES permit requirements.

Stormwater Management Program: University plans, procedures and practices required by EPA and ADEM to obtain NPDES MS4 permit and NPDES construction stormwater permits for construction projects (disturbing one or more acre of land).

Stormwater Pollutant: Chemicals, sediment, trash, disease-carrying organisms, and other contaminants picked up by stormwater as it runs off roofs and roads into rivers, streams and other water bodies. Studies show that stormwater pollution rivals sewage plants and large factories as a source of damaging pollutants in drinking water and at water bodies.

TMDL: Total Maximum Daily Load designates the calculated maximum amount of pollutant that a body of water can receive and still safely meet water quality standards. TMDL= Wasteload Allocation (NPS) + Load Allocation (PS) + Margin of Safety.

Town Creek: One of two principal stream systems, including all tributaries and main channel streams that flow on the University main campus (see appendix 1); a tributary of Chewacla Creek, which flows into the Tallapoosa River.

Town Creek Watershed: Area of land on the Auburn University main campus that drains the tributaries, main channel, stream banks, and floodplain of Town Creek (see appendix 1).

University Land: All land owned or leased by Auburn University.

VI POLICY PROCEDURES

- A. Auburn University Facilities Management ("Facilities Management") will administer this policy on behalf of the University.

- B. The University's Department of Risk Management and Safety is primarily responsible for reporting the University's compliance efforts, maintaining the University's SWMP and facilitating progress with other University groups that have responsibility towards the Permit's overall objective
- C. Facilities Management shall establish a Stormwater Management Committee (SWMC) as a subcommittee of the Master Plan Committee. The SWMC shall:
 - 1. Develop, implement, and maintain a Stormwater Management Program to, comply with the Permit, at a minimum, with a goal to have Parkerson Mill Creek removed from the 303(d) list between 2016 and 2021 consistent with 303d list guidelines;
 - 2. Review and update the SWMP as needed;
 - 3. Develop a checklist to ensure compliance with this policy and the management plans described herein.
- D. The SWMC will include members from the Master Plan Committee as well as additional ad hoc representatives, to include, but not limited to, the Alabama Cooperative Extension System; Athletics Department; Campus Planning; College of Agriculture; College of Sciences and Mathematics; Design and Construction; Housing & Residence Life; Landscape Services; the Office of Risk Management and Safety; the Office of Sustainability; the School of Forestry; and Division of Student Affairs.

VII SANCTIONS

This Policy serves as the regulatory mechanism to prohibit activities on University Land that would be non-compliant with either the Permit or the Stormwater Program.

In the event of non-compliant activity by an organizational unit of the University, the appropriate chain of command will be used to bring the activity back into compliance or cause it to stop. In the event of intentional non-compliant activity by a student(s), the Code of Student Discipline may apply. For intentional non-compliant activities by a University employee(s), progressive discipline measures may apply. For intentional or negligent non-compliant activities resulting from a University Contractor, work stoppage, formal project review, and appropriate corrective actions may apply.

X EXCEPTIONS

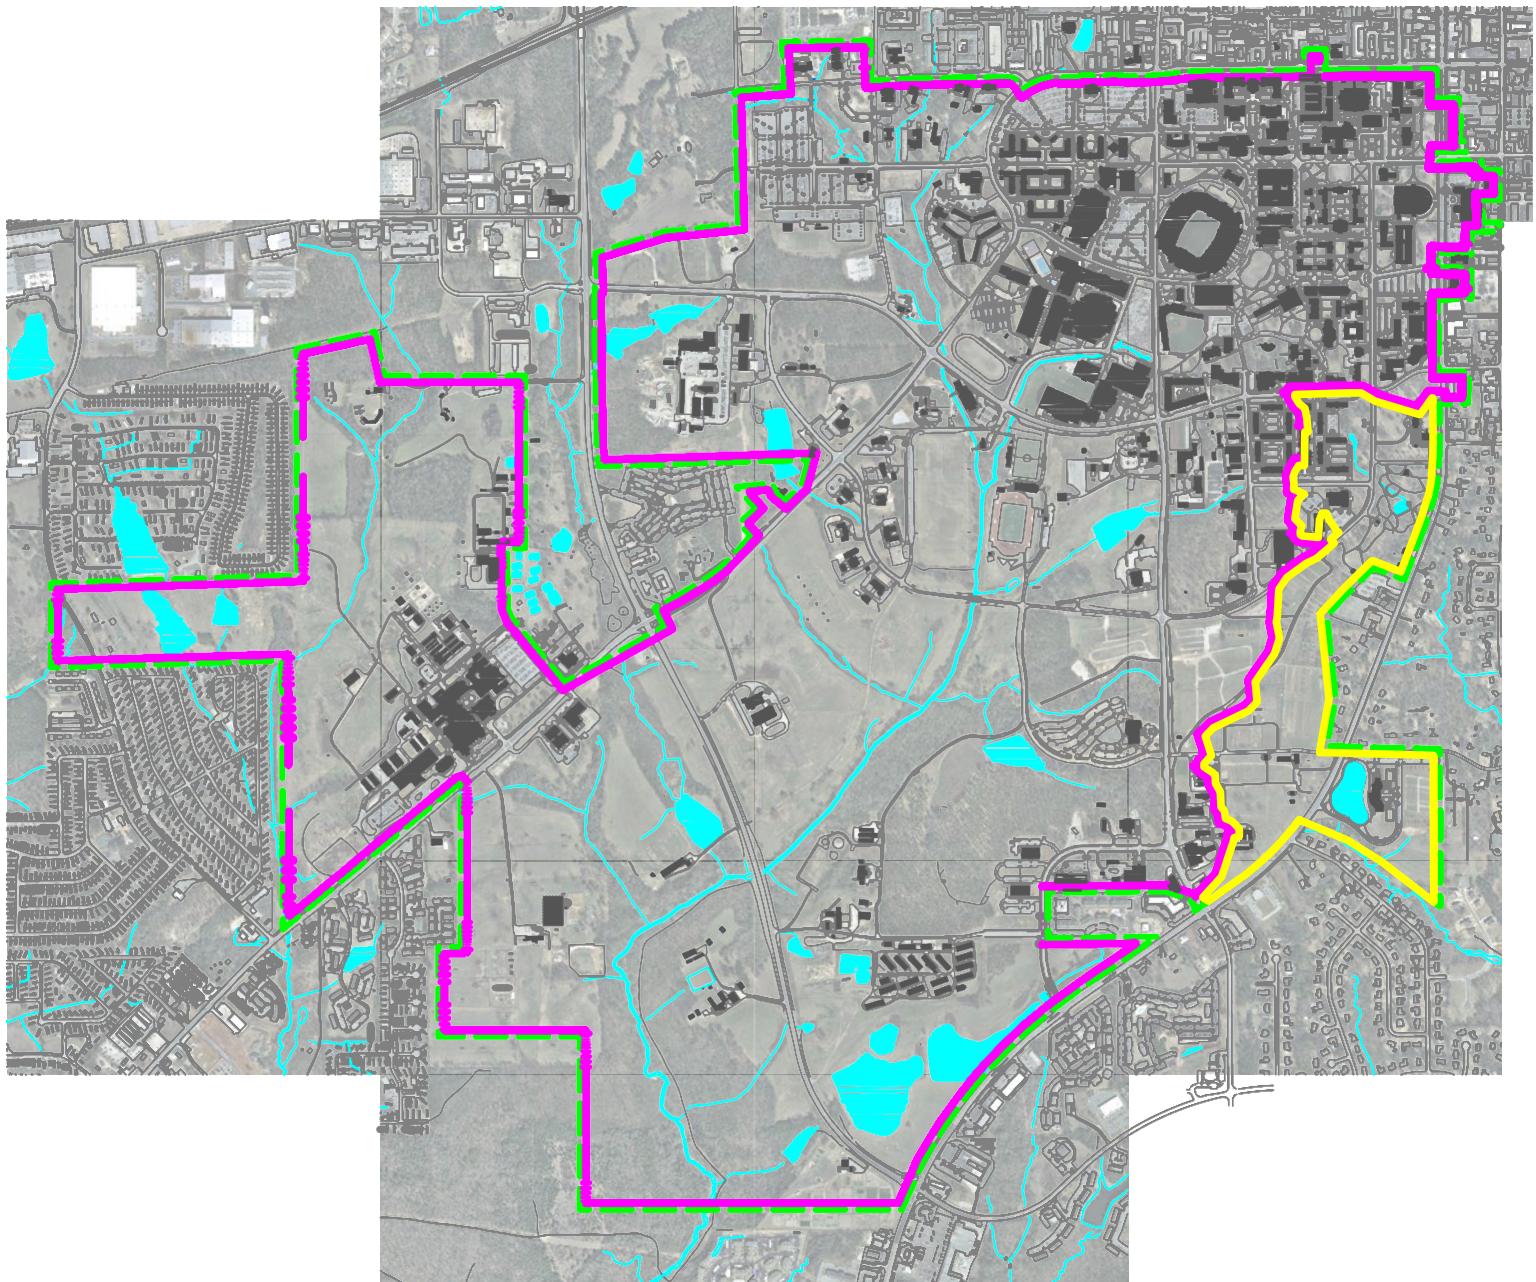

This policy applies to the Auburn University main campus. All other University Land is exempt.

X INTERPRETATION

The Responsible Officer is authorized to interpret questions and issues regarding the requirements and applicability of this policy.

Floatables -Does Not Include Trash!	<input type="checkbox"/> Sewage (Toilet Paper, etc.) <input type="checkbox"/> Suds <input type="checkbox"/> Petroleum (oil sheen) <input type="checkbox"/> Other:	<input type="checkbox"/> Few/slight; origin not obvious <input type="checkbox"/> 1 - Few/slight; origin not obvious	<input type="checkbox"/> 2 - Some; indications of origin (e.g., possible suds or oil sheen) <input type="checkbox"/> 3 - Some; origin clear (e.g., obvious oil sheen, suds, or floating sanitary materials)

Section 4: Physical Indicators for Both Flowing and Non-Flowing Outfalls

Are physical indicators that are not related to flow present? Yes No *(If No, Skip to Section 6)*

INDICATOR	CHECK if Present	DESCRIPTION	COMMENTS
Outfall Damage	<input type="checkbox"/>	<input type="checkbox"/> Spalling, Cracking or Chipping <input type="checkbox"/> Corrosion	<input type="checkbox"/> Peeling Paint
Deposits/Stains	<input type="checkbox"/>	<input type="checkbox"/> Oily <input type="checkbox"/> Flow Line <input type="checkbox"/> Paint	<input type="checkbox"/> Other:
Abnormal Vegetation	<input type="checkbox"/>	<input type="checkbox"/> Excessive <input type="checkbox"/> Inhibited	
Poor pool quality	<input type="checkbox"/>	<input type="checkbox"/> Odors <input type="checkbox"/> Suds	<input type="checkbox"/> Colors <input type="checkbox"/> Excessive Algae <input type="checkbox"/> Floatables <input type="checkbox"/> Oil Sheen <input type="checkbox"/> Other:
Pipe benthic growth	<input type="checkbox"/>	<input type="checkbox"/> Brown <input type="checkbox"/> Orange	<input type="checkbox"/> Green <input type="checkbox"/> Other:

Section 5: Overall Outfall Characterization

- Unlikely Potential (presence of two or more indicators) Suspect (one or more indicators with a severity of 3) Obvious

Section 6: Data Collection

1. Sample for the lab?
 Yes No
2. If yes, collected from:
 Flow Pool
3. Intermittent flow trap set?
 Yes No
If Yes, type: OBM Caulk dam

Section 7: Any Non-Illicit Discharge Concerns (e.g., trash or needed infrastructure repairs)?
